Linguistic Supertypes

Carsten Levisen

Linguistic Supertypes Per Durst-Andersen,2011-02-28 The book offers a completely new view of language and of languages such as Russian, Chinese, Bulgarian, Georgian, Danish and English by dividing them into three supertypes on the basis of a step-by-step examination of their relationship to perception and cognition, their representation of situations and their use in oral and written discourse. The dynamic processing of visual stimuli involves three stages: input (experience), intake (understanding) and outcome (a combination). The very choice among three modalities of existence gives a language a certain voice -- either the voice of reality based on situations, the speaker's voice involving experiences or the hearer's voice grounded on information. This makes grammar a prime index: all symbols are static and impotent and need a vehicle, i.e. grammar, which can bring them to the proper point of reference. Language is shown to be a living organism with a determinant category, aspect, mood or tense, which conquers territory from other potential competitors trying to create harmony between verbal and nominal categories. It is demonstrated that the communication processes are different in the three supertypes, although in all three cases the speaker must choose between a public and a private voice before the grammar is put into use.

Linguistics Inside Out George Wolf,Nigel Love,1997-01-01 Roy Harris's thoroughgoing attack on the presuppositions underpinning the dominant traditions of Western thought about language, and his advocacy of a radically reconceived linguistics focused on the idea that the linguistic sign is contextually created and interpreted as a function of the meaningful integration of communicative behaviour, have made him one of the most controversial figures in the field today. In the essays in this volume Naomi S. Baron, Bob Borsley, Philip Carr, David Fleming, Rom Harré, Anthony Holiday, John E. Joseph, Frederick J. Newmeyer, David R. Olson, Trevor Pateman, John Sören Pettersson and John R. Taylor offer a critical examination of various aspects and implications of Harris's views, in reponse to which Harris contributes an article that both engages with his critics and develops some of the major themes of his work.

Mentality and Thought Per Durst-Andersen,Elsebeth F. Lange,2010 Mentality and Thought - North, South, East and West presents the reader with an informed pluri-disciplinary discussion of the concept of mentality, its relevance and its interconnection with culture past and present, on the one hand, and cognition and mental frames on the other. The exploration is one of both theoretical depth and socio-historical width, each paper providing its own synthetic combination of

conceptual and empirical analysis. --Book Jacket.

Formal and Functional Perspectives on Tense and Related Categories Christian Heyde Petersen,2004 This book explores the gap that has developed between two sides in linguistics: the formal tradition and the functional tradition. It discusses fundamental issues such as tense, aspect and action by examining and comparing insights from the two traditions with a view to determining whether there are any possibilities of future bridge-building between the two approaches. This study focuses on comparing the actual output of different linguistic approaches and examines their 'usefulness'. A major aim is, therefore, to evaluate and identify the most useful approach.

Sign Studies and Semioethics Susan Petrilli,2014-10-09 This book examines the issues surrounding the problematic perpetuation of dominant sign systems through the framework of 'semioethics'. Semioethics is concerned with using semiotics as a powerful tool to critique the status quo and move beyond the reproduction of the dominant order of communication. The aim is to present semioethics as a method to engage semiotics in an active rethink of our ability as humans to affect change.

Chinese Computational Linguistics and Natural Language Processing Based on Naturally Annotated Big Data Maosong Sun,Xiaojie Wang,Baobao Chang,Deyi Xiong,2017-10-06 This book constitutes the proceedings of the 16th China National Conference on Computational Linguistics, CCL 2017, and the 5th International Symposium on Natural Language Processing Based on Naturally Annotated Big Data, NLP-NABD 2017, held in Nanjing, China, in October 2017. The 39 full papers presented in this volume were carefully reviewed and selected from 272 submissions. They were organized in topical sections named: Fundamental theory and methods of computational linguistics; Machine translation and multilingual information processing; Knowledge graph and information extraction; Language resource and evaluation; Information retrieval and question answering; Text classification and summarization; Social computing and sentiment analysis; NLP applications; Minority language information processing.

Cultural Semantics and Social Cognition Carsten Levisen,2012-12-06 Presenting original, detailed studies of keywords of Danish, this book breaks new ground for the study of language and cultural values. Based on evidence from the semantic categories of everyday language, such as the Danish concept of hygge (roughly meaning, 'pleasant togetherness'), the book provides an integrative socio-cognitive framework for studying and understanding language-particular universes. It is argued that the worlds we live in are not linguistically and conceptually neutral, but rather that speakers who live by Danish concepts are likely to pay attention to their world in ways suggested by central Danish keywords and lexical grids. By means of a sophisticated semantic methodology, the author accounts for the meanings of even highly culture-specific and untranslatable linguistic concepts. The book offers new tools for comparative research into the diversity of semantic and cultural systems in contemporary Europe. Additionally, it contributes to the emerging discipline of cultural semantics, and to

the ongoing debates of linguistic diversity, metalanguage, and the use of linguistic evidence in studies of culture and social cognition.

Naming and Framing Viktor Smith,2021-02-17 This book offers an innovative, unified theoretical model for better understanding the processes underpinning naming and framing and the power that words exert over human minds. The volume integrates theoretical paradigms and empirical insights from across a broad array of research disciplines, several of which have not been combined before, and uses this foundation as a point of departure for introducing its four-layered model of distinct but connected levels of analysis. Bringing together insights from cognitive linguistics and psycholinguistics together with multimodal perspectives, Smith establishes new cross-disciplinary links, further integrating work from neighbouring fields such as marketing, health communication, and political communication, that indicate paths for future research and implications for communicative ethics. This book will be of particular interest to students and scholars in multimodality, communication, semiotics, cognitive psychology, and linguistics, as well as those in related disciplines such as marketing, political communication, and health communication.

Questions Pia Lauritzen,2017-12-01 Questions: Between Identity and Difference is in many ways a curious book. It is a scholarly book, but tests the boundaries of traditional academic methods. It is a philosophical book, but bases its arguments on observational studies in classrooms where Danish, Russian, Spanish, and Chinese schoolchildren are taught in their native languages. It is a demanding book, one that assumes its readers think for themselves. Yes it is also a generous book, which draws on the author's own experience in researching and exploring what it means to be human across a variety of thoughts and behavioural patterns.

Cognitive Linguistics and the Study of Chinese Dingfang Shu,Hui Zhang,Lifei Zhang,2019-11-15 Bringing together contributions from a group of prominent researchers, within a cognitive-linguistic framework, this volume sheds light on linguistic structures and usages characteristic of the Chinese language, including noun-verb inclusion, the conceptual spatialization of actions, existential constructions, conceptual structures and coherence, idioms and metaphors, language acquisition of caused motion, etc. The contributions are committed to the principle of "converging evidence" that has been advocated in Cognitive Linguistics since its inception. Some studies in this volume combine introspective methods with theoretical analysis, while others rely on corpus-based, experimental and neuroscientific methods. Featuring diverse topics and multiple methods, this collection will be useful to readers who are interested in the grammatical and conceptual structure of Chinese, as well as in the state-of-the-art of Cognitive Linguistics in China.

Connecting Grammaticalisation Jens Nørgård-Sørensen,Lars Heltoft,Lene Schøsler,2011 Grammar is seen as a complex sign system, and, as a consequence, grammatical change always comprises semantic change. The book introduces

the concept of connecting grammaticalisation to describe the formation, restructuring and dismantling of such complex paradigms. It offers a broad general discussion of theoretical issues and three case studies

International Handbook of Semiotics Peter Pericles Trifonas,2015-05-11 This book provides an extensive overview and analysis of current work on semiotics that is being pursued globally in the areas of literature, the visual arts, cultural studies, media, the humanities, natural sciences and social sciences. Semiotics—also known as structuralism—is one of the major theoretical movements of the 20th century and its influence as a way to conduct analyses of cultural products and human practices has been immense. This is a comprehensive volume that brings together many otherwise fragmented academic disciplines and currents, uniting them in the framework of semiotics. Addressing a longstanding need, it provides a global perspective on recent and ongoing semiotic research across a broad range of disciplines. The handbook is intended for all researchers interested in applying semiotics as a critical lens for inquiry across diverse disciplines.

The Mathematical Mind of F. M. Dostoevsky Michael Marsh-Soloway,2024-11-19 The Mathematical Mind of F. M. Dostoevsky: Imaginary Numbers, Non-Euclidean Geometry, and Infinity reconstructs the curriculum and readings that F. M. Dostoevsky encountered during his studies and connects such sources to the mathematical references and themes in his published works. Prior to becoming a man of letters, Dostoevsky studied at the Main Engineering School in St. Petersburg from 1838 to 1843. After he was arrested, submitted to mock execution by firing squad, and sentenced to penal servitude in Siberia for his involvement in the revolutionary Petrashevsky Circle in 1849, most of his books and journals from the period of his education were confiscated, and destroyed by the Third Section of the Russian Secret Police. Although most scholars discount the legacy of his engineering studies, the literary aesthetics of his works communicate an acute awareness of mathematical principles and debates. This book unearths subtexts in works by Dostoevsky, communicating veins of mathematical thought that evolved throughout Classical Antiquity, the Renaissance, and the Scientific Revolution.

Stories of Home Devika Chawla,Stacy Holman Jones,2015-09-17 Notions of home are of increasing concern to persons who are interested in the unfolding narratives of inhabitation, displacement and dislocation, and exile. Home is viewed as a multidimensional theoretical concept that can have contradictory meanings; homes may be understood as spaces as well as places, and be associated with feelings, practices, and active states of being and moving in the world. In this book, we offer a window into the distinct ways that home is theorized and conceptualized across disciplines. The essays in this volume pose and answer the following critical and communicative questions about home: 1) How do people "speak" and "story" home in their everyday lives? And why? 2) Why and how is home—as a material presence, as a sense and feeling, or as an absence—central to our notion of who we are, or who we want to become as individuals, and in relation to others? 3) What is the theoretical purchase in making home as a "unit of analysis" in our fields of study? This collection engages home from diverse contexts and disparate philosophical underpinnings; at the same time the essays converse with each other by

centering their foci on the relationship between home, place, identity, and exile. Home—how we experience it and what it that says about the "selves" we come to occupy—is an exigent question of our contemporary moment. Place, Identity, Exile: Storying Home Spaces delivers timely and critical perspectives on these important questions.

The Construal of Spatial Meaning Carita Paradis,Jean Hudson,Ulf Magnusson,2013-04-25 This book deals with how language users express and understand literal and metaphorical spatial meaning in language and through gesture and pointing. The research draws on data from textual investigation using corpora, as well as from experiments of various kinds, such as psycholinguistic experiments and eye-tracking.

On Germanic Linguistics Irmengard Rauch,Gerald F. Carr,Robert L. Kyes,2011-06-24 TRENDS IN LINGUISTICS is a series of books that open new perspectives in our understanding of language. The series publishes state-of-the-art work on core areas of linguistics across theoretical frameworks as well as studies that provide new insights by building bridges to neighbouring fields such as neuroscience and cognitive science. TRENDS IN LINGUISTICS considers itself a forum for cutting-edge research based on solid empirical data on language in its various manifestations, including sign languages. It regards linguistic variation in its synchronic and diachronic dimensions as well as in its social contexts as important sources of insight for a better understanding of the design of linguistic systems and the ecology and evolution of language. TRENDS IN LINGUISTICS publishes monographs and outstanding dissertations as well as edited volumes, which provide the opportunity to address controversial topics from different empirical and theoretical viewpoints. High quality standards are ensured through anonymous reviewing.

Computing and Philosophy in Asia Soraj Hongladarom,2009-03-26 This volume is a collection of selected papers presented at the Second Asia-Pacific Computing and Philsosophy Conference, which was held in Bangkok, Thailand in January 2005. The conference was organized by the Center for Ethics of Science and Technology, Chulalongkorn University on behalf of the International Association of Computing and Philosophy (www.ia-cap.org). Computing have had a long relationship with philosophy, starting from the problem of how symbols being manipulated in computing bear a relation to the outside world, to those of artificial intelligence, robotics, computer simulation, and so on. Moreover, as computer technologies have become thoroughly pervasive in today's environment, there are also issues concerning social and ethical impacts brought about by them. The papers in the volume represent a wide variety of concerns and various dimensions within which computing and philosophy are related. Furthermore, it also represents some of the first attempts to highlight cultural dimensions of computing and philosophy, which became prominent when the conference was held for the first time within the milieu of an Asian culture. (The First Asia-Pacific Computing and Philosophy was held in Canberra, Australia.)

Hence, many of the papers in the volume address this added dimension. Apart form the usual problems of how computers and human lives are interconnected, the papers here also discuss how computers are related to human lives as lived in a specific culture. Thus the book breaks a new ground and should be of interest to a wide range of scholars and students who are interested, not only on computing and philosophy generally construed, but also on this exciting new dimension of how the cultures of Asia, the West, and others bear upon the traditional issues in computing and philosophy, and on how this dimension raises some new concerns and agenda. Among the topics discussed in this volume are: political online forums in Saudi Arabia, e-democracy and structural transformation of public sphere, the Buddhist informational person, a glance into the lives of computerized generation in Thailand, technology and journalism in the market, local approaches and global potential (?) of information ethics, computer-enhanced good life, computer teaching ethics, and many others.

Defaults in Morphological Theory Nikolas Gisborne,Andrew Hippisley,2017 This volume sets out four different default-based frameworks for describing morphology. Major proponents of these frameworks address a range of questions about the role of defaults in the lexicon, such as the place of morphology in the grammar and the challenge of meaning-form dissociations that plagues morphology.
