Matter Transmission Nicolás Salazar Sutil, 2018-05-17 Arguing for a paleocybernetic approach to current media studies debates, Nicolas Salazar Sutil develops an original framework for a new media ecology that embraces the primitive, the prehistoric, and the brute. Paying serious attention to materials used for cultural mediation that are unprocessed, unexplained, and raw such as bones and limestones, Salazar Sutil posits that advanced industrialisation of new media technology has prompted countercultural movements that call for radical new ways of transmitting culture, for instance

through an experiential and high-tech appreciation of prehistoric landscape heritage. The future calls for a Palaeolithic awareness of living landscape as medium for the embodied transmission of cultural imaginaries and memories. The more media technology spurs mass forms of instantaneous media communication, the greater the need for primitive knowledge of earthling body and earthly landscape, our prime media for sustainable cultural transmission.

A Companion to Japanese Cinema David Desser,2022-03-09 Go beyond Kurosawa and discover an up-to-date and rigorous examination of historical and modern Japanese cinema In *A Companion to Japanese Cinema*, distinguished cinematic researcher David Desser delivers insightful new material on a fascinating subject, ranging from the introduction and exploration of under-appreciated directors, like Uchida Tomu and Yoshimura Kozaburo, to an appreciation of the Golden Age of Japanese cinema from the point of view of little-known stars and genres of the 1950s. This Companion includes new resources that deal in-depth with the issue of gender in Japanese cinema, including a sustained analysis of Kawase Naomi, arguably the most important female director in Japanese film history. Readers will appreciate the astute material on the

connections and relationships that tie together Japanese television and cinema, with implications for understanding the modern state of Japanese film. The Companion concludes with a discussion of the Japanese media's response to the 3/11 earthquake and tsunami that devastated the nation. The book also includes: A thorough introduction to the History, Ideology, and Aesthetics of Japanese cinema, including discussions of Kyoto as the cinematic center of Japan and the Pure Film Movement and modern Japanese film style An exploration of the background to the famous story of Taki no Shiraito and the significant and underappreciated contributions of directors Uchida Tomu, as well as Yoshimura Kozaburo A rigorous comparison of old and new Japanese cinema, including treatments of Ainu in documentary films and modernity in film exhibition Practical discussions of intermediality, including treatments of scriptwriting in the 1930s and the influence of film on Japanese television Perfect for upper-level undergraduate and graduate students studying Japanese and Asian cinema, A Companion to Japanese Cinema is a must-read reference for anyone seeking an insightful and contemporary discussion of modern scholarship in Japanese cinema in the 20th and 21st centuries.

Process Cinema Scott MacKenzie, Janine Marchessault, 2019-07-11 Handmade films stretch back to cinema's beginnings, yet until now their rich history has been neglected. Process Cinema is the first book to trace the development of handmade and hand-processed film in its historical and contemporary contexts, and from a global perspective. Mapping the genealogy of handmade film, and uncovering confluences, influences, and interstices between various international movements, sites, and practices, Process Cinema positions the resurgence of handmade and process cinema as a counter-practice to the rise of digital filmmaking. This volume brings together a range of renowned academics and artists to examine contemporary artisanal films, DIY labs, and filmmakers typically left out of the avant-garde canon, addressing the convergence between the analog and the digital in contemporary process cinema. Contributors investigate the history of process cinema - unscripted, improvisatory manipulation of the physicality of film - with chapters on pioneering filmmakers such as Len Lye and Marie Menken, while others discuss an international array of collectives devoted to processing films in artist-run labs from South Korea to Finland, Australia to Austria, and Greenland to Morocco, along with historical and contemporary practices in Canada and the United States. Addressing the turn to a new, sustainable creative ecology that is central to handmade films in the twenty-first century, and that defines today's reinvigorated film cultures, Process Cinema features some of the most beautiful handcrafted films and the most forward-thinking filmmakers within a global context.

Feeling Media Miryam Sas, 2022-08-22 In Feeling Media Miryam Sas explores the potentialities and limitations of media theory and media art in Japan. Opening media studies and affect theory up to a deeper engagement with works and theorists outside Euro-America, Sas offers a framework of analysis she calls the affective scale—the space where artists and theorists work between the level of the individual and larger global and historical shifts. She examines intermedia, experimental animation, and Marxist theories of the culture industries of the 1960s and 1970s in the work of artists and thinkers ranging

from filmmaker Matsumoto Toshio, photographer Nakahira Takuma, and the Three Animators' Group to art critic Hanada Kiyoteru and landscape theorist Matsuda Masao. She also outlines how twenty-first-century Japanese artists—especially those responding to the Fukushima disaster—adopt and adapt this earlier work to reframe ideas about collectivity, community, and connectivity in the space between the individual and the system.

Computer-Generated Images Nadia Magnenat-Thalmann,Daniel Thalmann,2012-12-06 Research, development, and applications in computer graphics have dramatically expanded in recent years. Because of decreasing prices, superior hardware is now being used and image quality is better than ever. Many people now require image-synthesis techniques and software for their applications. Moreover, the techniques of computer animation have become very popular. In this book, we present a wide range of applications of computer graphics. This book is a collection of 44 papers in various areas of computer graphics selected from papers presented at Graphics Interface '85. Graphics Interface '85, held from May 27 to 31 in Montreal, was the first truly international computer graphics conference in Canada. This year, for the first time, the conference was presented jointly by the Computer Graphics Society and the Canadian Man-Computer Communications Society. This new arrangement gave the conference international scope. The conference was sponsored by the Department of Communications in Ottawa, the Department of Science and Technology in Quebec, Supply and Services Canada, the Natural Sciences and Engineering Research Council of Canada, Hydro-Quebec, the Association Canadienne Française pour l'Avancement des Sciences, and the Canadian Broadcasting Corporation. Graphics Interface '85 was organized by l'Ecole des Hautes Etudes Commerciales of the University of Montreal. Over 100 papers were submitted to the conference, but 64 were selected by the international program committee for presentation. This book contains new expanded versions of the papers.
